The discrepancy between the totals and the sum in some cases can be explained by using rounded data.

## Foreword

The need for production of energy balance is linked to such important issues of global policy, as climate change and energy security. The publication includes statistical data for 2016 year.

Energy balance leads to the development of a wide range of growing interest of users, as it is the best way to represent the local or global policy planning.

2016 Energy Balance, like the previous years' balances, is based on the recommendations drawn up by the International Energy Agency and fully complies with international standards.

The publication is based on the declared data of various surveys conducted by the National Statistics Office during 2017. Different types of administrative data as well as expert assessments have been used in order to create the energy balance.

Business remarks and proposals on format and contents of this publication will be perceived by the authors group with gratitude.

The publication is designed for various groups of users.

National Statistics Office of Georgia

### Survey Program

In order to collect data from the energy sector, producers, suppliers, distributors and traders of energy forms (coal, natural gas, electricity, oil and oil products) were surveyed at full coverage as a result of specially organized statistical surveys.

In order to collect the information about consumption of energy forms, in comparison of survey for 2014 year (when the survey covered all kind of institutional sectors: non-financial corporations, financial corporations, non-profit institutions serving households, households and public administration), the survey for 2017 year covered only households and non-financial corporations. Only enterprises from agriculture, industry, constriction and transport sectors were investigated from non-financial corporations and for formation of data from other sectors (service sector) expert assessment method was used.

In the household sector the data were collected by face-to-face interviewing method, while in other sectors data collection was primarily carried out by means of online questionnaire, however the respondents were able to use other alternative means (paper questionnaire, electronic questionnaire in excel format, fax, etc.).

Various types of administrative data were used to complete energy balance in addition to the above-mentioned surveys. In certain cases expert assessments were carried out as well.

## I. Key indicators about Georgia

### 1.1 Main facts about Georgia

<b>Area</b>	69 700 km <sup>2</sup>
<b>Length of state borders</b>	2 148 km
<b>Land borders</b>	1 839 km
<b>The highest mountain</b>	„Shkhara” – 5200 m
<b>Population</b>	3 718.2 thousand persons (01.01.2017)
<b>Density</b>	65.0/km <sup>2</sup> <sup>1</sup>
<b>Capital</b>	Tbilisi
<b>Official languages</b>	Georgian
<b>Currency</b>	Georgian lari (GEL)

### 1.2 Key economic indicators about Georgia, 2016

Indicators	2016
GDP at current prices, mil. GEL	34028.5
GDP at constant 2010 prices, mil. GEL	27072.4
DGP real growth, %	2.8
GDP per capita (at current prices), USD	3864.6
Unemployment rate, percentage	11.8
CPI (Inflation), Annual Average to the Annual Average	102.1
Foreign Direct Investments, Mil. USD	1583.8
External Trade (FOB), Mil. USD	2113.0
Import (CIF), Mil. USD	7295.0

<sup>1</sup> The controlled area is in use - 57 178.7 km<sup>2</sup>

### 1.3 Hydro and Thermal Power Plants operating in Georgia, 2016

	Name	Installed capacity (MW)
<b>Hydro Electricity Plants</b>		
1	Engurhesi	1 300
2	Vardnilhesi	220
3	Xramhesi 1	112.8
4	Xramhesi 2	114.4
5	Zhinvalhesi	130
